I am here to tell you about EMERSE

emerse
ELECTRONIC MEDICAL RECORD SEARCH ENGINE

http://project-emerse.org/presentations.html

2021 study out of UC Irvine: *Design, Implementation, and Usability of the Electronic Medical Record Search Engine (EMERSE) Tool*
https://escholarship.org/uc/item/44p23878

"Users unanimously responded that they would recommend the system to others, and…for a tool they found so useful, they believed that far too few people both within and outside of their network knew about the tool's existence."

Unstructured vs Structured Data

EMERSE is for this…	…not this
Unstructured Data (free text)	*Structured Data*
Mrs. Jones is a 56 year old female with a history of HTN, hypercholesterolemia, and T2DM who comes to the clinic today with a 3 day h/o dizziness and severe headache on the left side.	WBC: 5.6 Total cholesterol: 182 Weight: 67.4 AST: 30 ALT: 52

emerse
ELECTRONIC MEDICAL RECORD   SEARCH ENGINE

80% of EHR data are in unstructured free text

structured data

unstructured data/free text

emerse
ELECTRONIC MEDICAL RECORD SEARCH ENGINE

http://project-emerse.org/presentations.html

The EMERSE solution

- A system "for the people"
- Users search the notes on their own
  - No need to wait in a queue for an analyst or a data scientist
- Easy-to-use for non-technical researchers
- Doesn't over-promise: user interaction is required

emerse
ELECTRONIC MEDICAL RECORD SEARCH ENGINE

The EMERSE solution

- A system "for the admins"
- Enterprise grade, easy to support
- Configurable with roles/privileges to control access
- Data are kept secure within a centralized, audited system
    - No need to download/store the data elsewhere

emerse
ELECTRONIC MEDICAL RECORD   SEARCH ENGINE

Find cohorts

EMERSE allows you to find cohorts based on things mentioned in the notes

– diseases

– drugs

– symptoms

– anything*
*if it is mentioned
Find cohorts

It's perfect for finding rare things…

…like rare cancers

Highlight documents
for chart review

Thoracocentesis confirmed the recurrence of mantle cell lymphoma. Disease restaging work-up revealed multicompartment lymphadenopathy in the neck, mediastinal, retrocrural, retroperitoneal and pelvic regions. Bone marrow was also involved. The patient was treated with a total of six cycles of rituximab, cyclophosphamide, vincristine, doxorubicin and dexamethasone (R-HyperCVAD) completed in January 2007. That treatment led to complete remission that lasted until October 2008, when the disease was found to have recurred in the left pleural space and retroperitoneum without bone marrow involvement.

ELECTRONIC MEDICAL RECORD SEARCH ENGINE

Our philosophy

It's important to see the terms/concepts in the context of the original text to truly understand the clinical meaning.

Case presentation

A 31-year old Caucasian British woman with a history of long-term zopiclone use and anorexia nervosa was admitted as an inpatient for a ten-day alcohol detoxification. Her weekly (four days out of seven) intake of alcohol was 180 units and her daily intake of zopiclone, 30 mg. Apart from a short period five years ago, she had been taking zopiclone for 13 years at daily doses of up to 90 mg. She admitted to using 'on top' of her prescribed medication, purchasing extra tablets from friends or receiving them *gratis* from her partner. After detoxification from alcohol and zopiclone, she was prescribed diazepam which she found ineffectual and voiced her intention of returning to zopiclone on leaving the hospital.

EMERSE is *fast*

| Query to identify all patients with the following	Reporting DB time (s)	EMERSE time (s)	EMERSE advantage
cavernous hemangioma	14,652	2	7,320x
gray platelet syndrome	14,940	2	7,470x
inferior lingular segment of the left upper lobe	17,784	9	1,980x

...enabling real-time querying

The future…

Incorporation of NLP features
- negation
- uncertainty
- subject (patient vs other)
- named entity recognition/mapping to ontologies
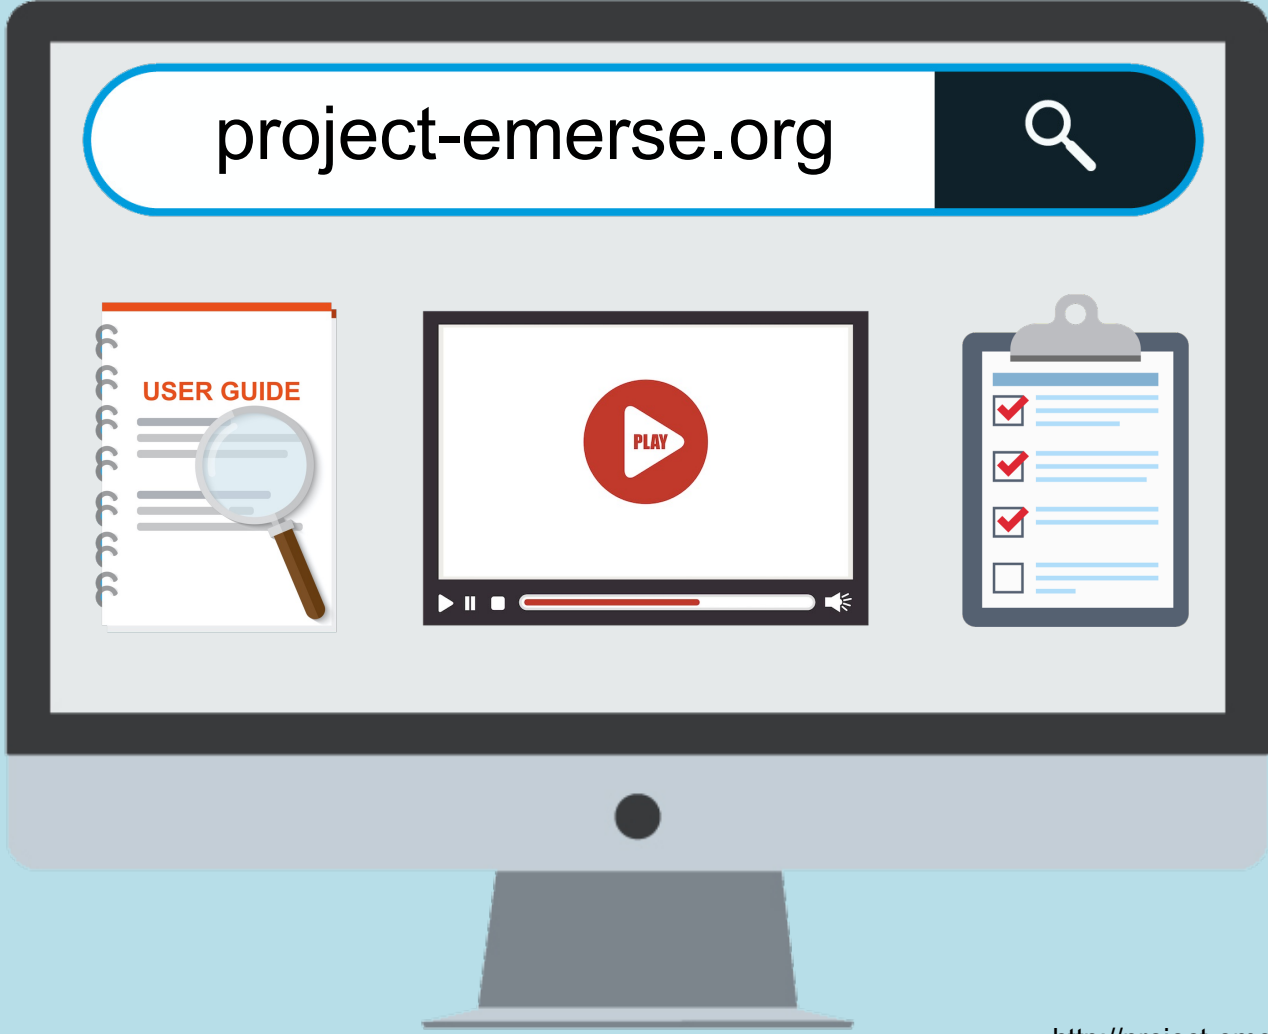

Data extraction from templated notes

emerse
ELECTRONIC MEDICAL RECORD SEARCH ENGINE

Ultrasonography displayed an inhomogeneous hypoechoic nodule measuring 20mm*17mm (Figure1). Biopsy examination of the lesion revealed scirrhous carcinoma. A chest computed tomography (CT) scan for metastases showed abnormal shadows in both upper lung fields. The patient was then referred to our department for definitive workup and treatment. She had no history of cough, sputum, or dyspnea. Our patient had no history of tobacco smoking and no exposure to any dusts associated with a high risk of lung damage. Her past history and family history were unremarkable. A chest X-ray showed slight peripheral infiltration shadows in both upper and middle lung fields (Figure2). A chest CT scan showed patchy peripheral ground-glass opacities and thickened interlobular septa in both upper lung fields (Figure3A). A peripheral blood cell count and serum and biochemical tests were normal. Autoantibody and vasculitis screening was negative. Testing for human immunodeficiency virus infection was negative. Serum carcinoembryonic antigen (CEA) and carbohydrate antigen 153 (CA15-3) were in the normal ranges (1.1ng/mL and 12.5U/mL, respectively), but granulocyte-macrophage colony-stimulating factor (GM-CSF) autoantibody was elevated (29.57?g/mL). Pulmonary function testing revealed normal lung volumes and diffusing capacity. Flexible fiberscopic bronchoscopy was then performed. The retrieved bronchoalveolar lavage fluid (BALF) was transparent; it did not have a milky appearance. However, BALF cytology showed alveolar macrophages with granular materials that stained positively with periodic acid-Schiff (PAS). Histological findings of a transbronchial lung biopsy specimen showed the alveolar spaces to be filled with PAS-positive granular materials (Figure4). As a result, this patient was diagnosed as having PAP.
